

Miguel Almeida

FRONTEND ENGINEER • PRODUCT ARCHITECTURE • DESIGN ENGINEERING

I build the interfaces teams rely on when seconds matter.

At F24 I cut request volume by 75% in a key alerting workflow, expanded regression test files 10x from 3 to 30, shipped message assistance across 13 languages, and helped raise the frontend suite to 7,000+ passing tests across 954 files. My scope spans architecture, business logic, resilience and release quality. I build product systems, not just screens.

EXPERIENCE

Software Engineer | Frontend & Product Systems

F24 • Berlin • Aug 2022 - Present

- Improved enterprise alerting and operational tooling, cutting request volume by 75% in a key alerting workflow, expanding regression test files 10x from 3 to 30, and shipping message assistance across 13 languages.
- Built core alerting workflows from product mockups to production, owning frontend architecture, business rules and interaction/state logic in Svelte and TypeScript.
- Migrated major workflows into React while delivery continued; defined shared UI patterns and typed contracts with Product, Design, Backend and QA.
- Authored 2,000+ automated checks inside a frontend suite with 7,000+ passing tests across 954 files, covering end-to-end flows, accessibility, regression and resilience.

Freelance Frontend Developer

Independent • Berlin • 2021 - 2022

Delivered responsive client products end to end, translating UX decisions into maintainable frontend systems from problem definition through implementation.

SELECTED ENGINEERING WORK

Needle

Semantic visual search engine • React 19 • TypeScript • Vite • XState • Web Workers

- Built semantic search over 10,000 Met artworks using hybrid HNSW/exact retrieval and field-weighted visual metadata.
- Virtualized and lazy-loaded dense results with responsive images for fast exploration.
- Owned search model, interaction design, performance and deployment end to end.

Second Voice

AI rewriting product • Next.js • React • TypeScript • Supabase • Playwright

- Built original-vs-rewrite comparison, explicit request state, recovery and controlled sharing.
- Implemented schema-validated provider/model routing and request-scoped telemetry without logging users' text.
- Rebuilt the Duet desktop/mobile interface while preserving end-to-end behavior.

Leu

Native iPhone PDF study app • Swift • SwiftUI • PDFKit • local-first architecture

- Built a native reader that keeps the learning loop inside the PDF: read, understand, recall and revisit.
- Designed source-grounded explanations, active recall, blind-spot detection and reconstruction around the exact passage.
- Kept the product local-first with native interaction, explicit provenance and separate logic/UI verification gates.

RECOMMENDATION

"Miguel takes full ownership of his tickets from start to finish and completes tasks without supervision. He manages his workload independently and reliably."

Richard Nespithal

Previous team lead
